Credit Highlights

Overview

Key strengths

A creditworthy controlling shareholder (**Enel Americas S.A.**; BBB-/Stable/--) that would support the company under any circumstance, including a hypothetical sovereign default of Colombia (BB+/Stable/B), where the company generates most of its cash flows.

Leading market position in Colombia's energy generation sector with 3.5 gigawatts (GW) of capacity and given that the company is the main energy distributor in Colombia, with a market share of 20% as of March 31, 2023.

Relatively predictable revenue stream, driven by its highly contracted status in the generation business, as well as its distribution business, which is stable in nature.

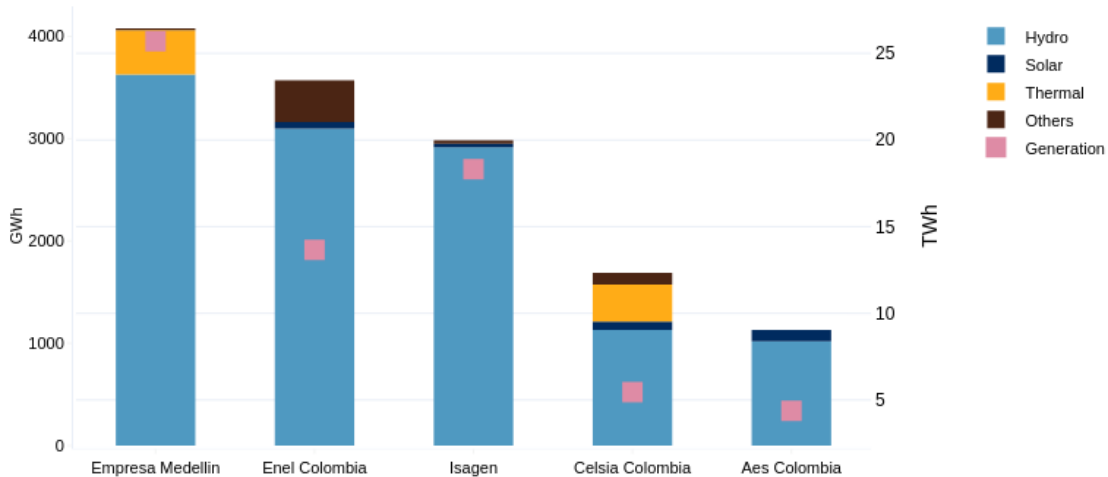

Key risks

Exposure to hydrological conditions because 86% of its installed capacity as of March 31, 2023, comes from hydropower plants.

We view Enel Colombia S.A. E.S.P.'s competitive position as a rating strength, considering its participation in both the generation and distribution business, as well as certain geographic diversification outside Colombia such as Panama, Costa Rica, and Guatemala. In addition, the entity has increasingly focused on renewables to address the challenges of the energy transition, which we view positively. Enel Colombia is currently the largest power distributor in Colombia with a market share close to 22.8% serving close to 3.8 million of end-users. It also holds a leading position in the generation business with almost 19.9% of market share and an installed capacity of 4,230 megawatts (MW) mostly from hydro-based energy. We expect the company to maintain this solid competitive position in the two businesses in the following years as both sectors are integral to the national energy matrix.

Enel Colombia consolidated its leading position in Colombia's generation business

Enel Colombia's and peers' Installed Capacity and Generation

GW--Gigawatt TWh--Terawatt Hours Source: S&P Global Ratings As of December 31, 2022

We view as positive the company's stable revenues due to its contracted status. In the generation business, and although most of Enel Colombia's contracts are due in the medium term (most of them within two to five years), we expect the company to continue renewing them, as was the case in the past. Enel Colombia has a conservative contracting policy that includes the worst hydrology scenario with a reliability level of 95%. In addition, it maintains a cautious capital structure, which would allow it to absorb any potential cash-flow swings, related to a lower energy generation and higher spot market purchases. In its distribution business, which is stable in nature, Enel Colombia maintains energy power purchase agreements (PPAs) that cover between 70% and 80% of its needs in 2023 and 2024, which reduces the exposure to energy purchases in the spot market under variable prices, considering that the high percentage of energy generation comes from hydro generation in Colombia. As a result, our base-case scenario assumes EBITDA margins to remain close to 50% in the following three years, as shown below:

Enel Colombia´s maintains its stable performance

Source: S&P Global Ratings. *2021 pro-forma

Enel Colombia´s leverage will remain prudent in the upcoming 12-24 months. This is supported by our expectations of adjusted debt-to-EBITDA ratio of 2x in 2023, 2024, and 2025 amid relatively stable EBITDA, which will be mainly used for investments as well as dividend payments. The mentioned ratio incorporates, as financial debt, Enel Colombia´s PPAs for the purchase of energy from third parties, which totaled COP7 billion as of Dec. 31, 2022. We view those balances as creating fixed, debt-like financial obligations that represent substitutes for debt-financed capital investments in generation capacity. Excluding the mentioned adjustment, debt to EBITDA will converge to 1.0x-1.5x in 2023-2025. We forecast EBITDA close to COP6.5 trillion in 2023, and COP7 trillion in 2024 and 2025 with 60% coming from the generation business and 40% from distribution. This growth will principally be driven by the entry into operations of various projects during the next 12 months, increased installed capacity, as well as an improvement in the operating efficiency of assets. Enel Colombia´s investment plan continues to prioritize the development of nonconventional renewable energy and the maintenance of the distribution business. Specifically, the company plans to invest COP2.5 trillion - COP3.0 trillion in 2023 and COP1.75 trillion - COP2.0 trillion in 2024, while forecasting a dividend payout ratio of 90% for 2023-2025.

Enel Colombia’s leverage remains prudent.

Leverage Evolution

Source: S&P Global Ratings

We will continue monitoring any development from a regulatory perspective. Overall, we continue to assess Colombia's regulatory, legal, and contractual framework as supportive, considering that it allows for the timely recovery of operating costs and capital. In addition, the track record of rate revisions has been transparent and satisfactory so far, with no history of abrupt changes. However, uncertainties regarding political intervention in the sector--to limit the rise in power prices to ease the economic burden on end consumers--could pose additional risks. Moreover, due to significant delays caused by local protests and roadblocks, Enel Colombia recently announced the suspension of the construction of its 205 MW wind project Windpeshi located in the department of La Guajira, a peninsula in northern Colombia with significant wind generation potential. We do not incorporate that wind farm in our base-case forecast and we will continue monitoring any political or social development and incorporate them in our analysis, although we don't expect any rating change.

Enel Colombia will continue to be a key subsidiary of its controlling shareholder, Enel Americas. In our view, the company is integral to the group's identity and strategy, and consequently, should receive parent support under any foreseeable circumstances. For this reason, we equalize our ratings on Enel Colombia with those on Enel Americas, allowing us to rate it above the sovereign rating on Colombia (foreign currency: BB+/Stable/B; local currency: BBB-/Stable/A-3).

Outlook

The stable outlook on Enel Colombia reflects our expectation that it will remain a core subsidiary of Enel Americas in the next 24 months and that the latter will support the company even in a hypothetical scenario of sovereign stress.

Downside scenario

We could downgrade Enel Colombia if we downgrade Enel Americas, which could happen if we downgrade Colombia, or if we think that the group has lesser incentives to support the subsidiary. This could happen if, for example, Enel Americas dilutes its voting stake or if we perceive Enel Colombia has become less strategic from a business perspective. We could revise Enel Colombia's SACP downward if its financial risk profile worsens due to, for example, a more aggressive commercial strategy amid worsening hydrology conditions or a more aggressive expansion plan, raising debt to EBITDA above 3.0x. We could also revise Enel Colombia's SACP downward if the cash sources-over-uses ratio drops below 1.2x, which could happen if the company's EBITDA falls by more than 15% in the next 12 months.

Upside scenario

A positive rating action on Enel Americas could lead us to upgrade Enel Colombia. Additionally, we could revise Enel Colombia's SACP upward if its financial ratios consistently improve, which could happen following a combination of lower dividend payouts and lower investments, reducing debt to EBITDA consistently below 1.0x and raising funds from operations (FFO) to debt above 50%.

Our Base-Case Scenario

Assumptions

- We're using macroeconomic assumptions for Colombia from our article, "Economic Outlook Emerging Markets Q2 2023: Global Crosscurrents Make For A Bumpy Deceleration," published on March 27, 2023. Our forecast for Colombia's GDP growth is 1.1% in 2023, 2.6% in 2024, and 3.0% in 2025. We expect inflation of 11% in 2023, 4.3% in 2024, and 3.4% in 2025.
- Normal hydrology, leading to net power generation of about 16,200 gigawatt hours (GWh) in 2023, 16,800 GWh in 2024, and 17,800 GWh in 2025.
- We expect rates for the generation business to increase in line with inflation and the exchange-rate variation.
- The distribution business to grow at the same pace of Colombia's GDP.
- Costs increases in line with inflation.
- Generation EBITDA margins of 65%-70% and distribution EBITDA margins of 35%-40%.
- Capital expenditures (capex) of COP2.5 trillion - COP3.0 trillion in 2023, COP2.0 trillion - COP2.5 trillion in 2024, and COP2.5 trillion - COP3.0 trillion in 2025. The company will use most of capex to develop nonconventional renewable capacity.
- Dividend payout ratio of 90% annually for 2023-2025.

Company Description

Enel Colombia generates, purchases, transports, distributes, and sells electric power in Colombia. Enel Colombia is the result of the merger that was approved in March 2022 between Emgesa S.A. E.S.P., Codensa S.A. E.S.P., Enel Green Power Colombia S.A. E.S.P., and ESSA2 SpA. As of Dec. 31, 2022, Enel Colombia is the largest electric energy distributor in Colombia and is the second-largest electric energy power generation company in Colombia by capacity. Enel Colombia also generates electricity in Panamá, Costa Rica, and Guatemala. The company benefits from a diversified asset base because it owns 21 hydroelectric power plants, 10 solar plants, and two thermal electric power assets with an installed capacity of about 4,230 MW (86% hydro, 10% thermal, and the remainder solar), generating almost 16,000 GWh last year.

Enel Colombia’s Installed Capacity Breakdown

Source: S&P Global Ratings. As of March 31, 2023

On the distribution business, Enel Colombia has authorization to operate for an indefinite duration and serves 3.8 million customers with a market share of close to 20%. Enel Americas holds 57.345% of Enel Colombia's capital stock, while Grupo Energia de Bogota S.A. E.S.P. (not rated) holds 42.515% of shares, and minority shareholders own 0.14%.

Peer Comparison

We chose as peers other electricity players that we rate in the region, such as Isagen S.A. E.S.P., Enel Americas S.A., AES Andes S.A., Enel Chile S.A., as well as global players such as Enel Colombia's ultimate controlling sponsor Enel SpA. From a business perspective, Enel Colombia currently has characteristics similar to AES Andes and Enel Americas, because all of three operate in more than one country in the region and generally in more than one segment, including electricity transmission or distribution. From a financial perspective, we view Enel Colombia as more conservative than peers, considering that its adjusted debt to EBITDA remains close to 2x, while the peer average is above 3x and they have larger investment plans.

Business Risk

Enel Colombia's business risk profile is supported by our view that it will maintain a solid competitive position in the Colombian market and its relatively stable cash flow because we expect most of its capacity will remain contracted. In addition, we view the distribution business as stable in nature. Our assessment also incorporates our favorable view of Colombia's regulatory, legal, and contractual framework. The key weaknesses include exposure to drought considering that the company's capacity is mostly hydro, and some exposure to volatile spot market conditions.

High share of contracted sales in the next 12-24 months. We expect Enel Colombia's capacity will remain highly contracted in the upcoming years. In the medium term, we anticipate some exposure to contracting risk, but we don't view this as a credit weakness for the company given that this is a market condition in Colombia because the average contract life in the country has always been shorter than in the rest of Latin America. In the past few years, Enel Colombia has been re-contracting its capacity, which we attribute to its high efficiency and track record in the industry.

We view Colombia's regulatory, legal, and contractual framework as supportive. The regulation in Colombia allows for the timely recovery of operating costs and capital. More importantly, the framework has a satisfactory record of rate revisions, therefore, we consider it as predictable and transparent, which supports the ratings. Enel Colombia has approximately 4.2 GW of installed capacity, most of which is in Colombia. Although exposure to natural resources is high, the company's prudent commercial strategy mitigates this risk. On the other hand, we expect some exposure to the spot market given that Enel Colombia will dispatch a portion of its capacity there.

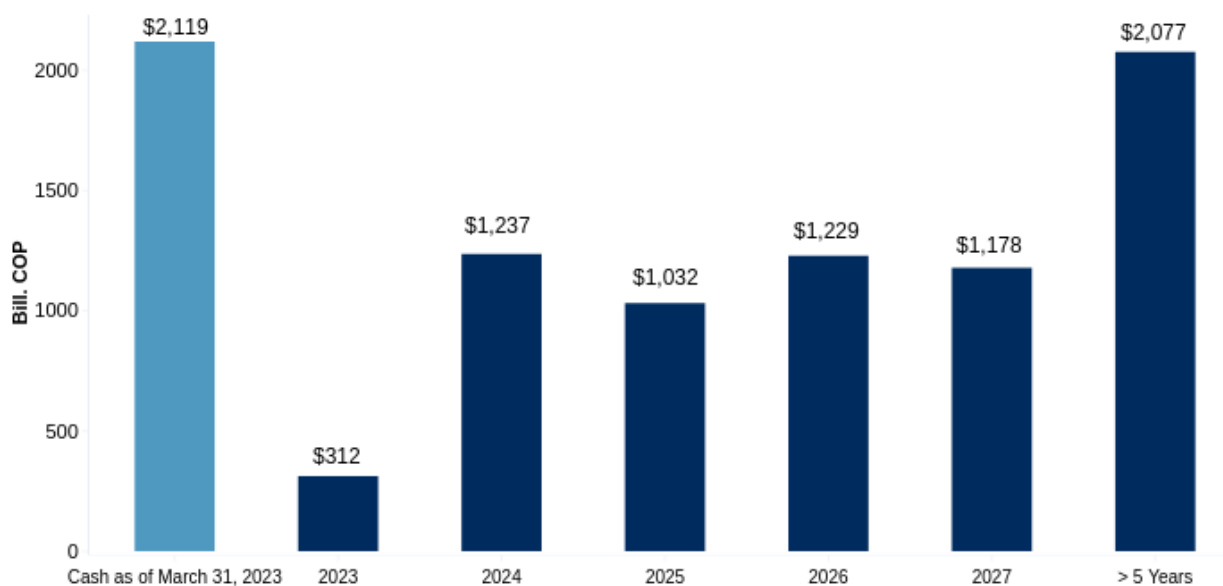

Financial Risk

We expect Enel Colombia’s leverage to remain prudent, with adjusted debt to EBITDA close to 2x. We forecast annual EBITDA close to COP6.5 trillion in 2023, and COP7 trillion in 2024 and 2025 with 60% coming from the generation business and 40% from distribution. This growth will be principally driven by the entry into operations of various projects during the next 12 months, increased installed capacity, as well as an improvement in the efficiency of assets due to the integration. Enel Colombia’s investment plan continues to prioritize the development of nonconventional renewable energy and the maintenance of the distribution business. Specifically, the company plans to invest COP2.5 trillion – COP3.0 trillion in 2023 and COP1.75 trillion – COP2.0 trillion in 2024, while forecasting a dividend payout ratio of 90% for 2023-2025.

Liquidity

We view Enel Colombia's liquidity as adequate. In addition, we continue to believe that Enel Colombia has sufficient financial flexibility, with proven access to capital markets and banks, which in our view, is enhanced by its ownership structure. Moreover, the company's financial policies are generally prudent, as seen in its historical and expected low leverage ratios. Finally, Enel Colombia is not subject to financial covenants on its outstanding bonds as long as it is rated in the investment-grade category.

Principal liquidity sources

- Cash balance and short-term investments of COP2.1 trillion as of March 31, 2023; and
- FFO of COP4.2 trillion - COP4.3 trillion.

Principal liquidity uses

- Short-term debt maturities of about COP1.2 trillion as of March 31,2023;
- Maintenance capex of COP2.0 trillion - COP 2.5 trillion; and
- Dividend payout ratio of 90% of net income, which the company can reduce if necessary.

Environmental, Social, And Governance

ESG Credit Indicators

ESG credit indicators provide additional disclosure and transparency at the entity level and reflect S&P Global Ratings' opinion of the influence that environmental, social, and governance factors have on our credit rating analysis. They are not a sustainability rating or an S&P Global Ratings ESG Evaluation. The extent of the influence of these factors is reflected on an alphanumeric 1-5 scale where 1 = positive, 2 = neutral, 3 = moderately negative, 4 = negative, and 5 = very negative. For more information, see our commentary "ESG Credit Indicators: Definition And Applications," published Oct. 13, 2021.

Environmental factors have an overall neutral influence on our credit rating analysis of Enel Colombia. We see as positive the recent incorporation of the distribution segment that allowed Enel Colombia to transition to an integrated business focused on renewables. As of the date of this report, close to 40% of the company's EBITDA comes from distribution, and the remaining 60% from power generation. In addition, the incorporation of EGP will continue to enlarge and diversify Enel Colombia's generation capacity, which will reach 5,000 MW in 2024.

Group Influence

We consider Enel Colombia to be a core subsidiary of Enel Americas, its controlling shareholder. We expect the parent to have the ability and willingness to provide sufficient support even during a potential sovereign default. This view allows us to rate Enel Colombia above our ratings on Colombia, while providing downside protection in case Enel Colombia's credit quality worsens on a stand-alone basis. Enel Americas holds 57.3% of Enel Colombia's voting shares, while Grupo de Energia de Bogota holds 42.5%.

Rating Above The Sovereign

Enel Colombia S.A E.S.P.

Issuer Credit Rating BBB-/Stable/--

Issuer Credit Ratings History

20-May-2021 BBB-/Stable/--

27-Mar-2020 BBB/Negative/--

31-Aug-2017 BBB/Stable/--

*Unless otherwise noted, all ratings in this report are global scale ratings. S&P Global Ratings credit ratings on the global scale are comparable across countries. S&P Global Ratings credit ratings on a national scale are relative to obligors or obligations within that specific country. Issue and debt ratings could include debt guaranteed by another entity, and rated debt that an entity guarantees.

No content (including ratings, credit-related analyses and data, valuations, model, software or other application or output therefrom) or any part thereof (Content) may be modified, reverse engineered, reproduced or distributed in any form by any means, or stored in a database or retrieval system, without the prior written permission of Standard & Poor's Financial Services LLC or its affiliates (collectively, S&P). The Content shall not be used for any unlawful or unauthorized purposes. S&P and any third-party providers, as well as their directors, officers, shareholders, employees or agents (collectively S&P Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Parties are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, for the results obtained from the use of the Content, or for the security or maintenance of any data input by the user. The Content is provided on an "as is" basis. S&P PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

Credit-related and other analyses, including ratings, and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. S&P's opinions, analyses and rating acknowledgment decisions (described below) are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P does not act as a fiduciary or an investment advisor except where registered as such. While S&P has obtained information from sources it believes to be reliable, S&P does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives. Rating-related publications may be published for a variety of reasons that are not necessarily dependent on action by rating committees, including, but not limited to, the publication of a periodic update on a credit rating and related analyses.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P reserves the right to assign, withdraw or suspend such acknowledgment at any time and in its sole discretion. S&P Parties disclaim any duty whatsoever arising out of the assignment, withdrawal or suspension of an acknowledgment as well as any liability for any damage alleged to have been suffered on account thereof.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P reserves the right to disseminate its opinions and analyses. S&P's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com (subscription), and may be distributed through other means, including via S&P publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.
