

# Integrated Policy on Health and Safety at Work, Environment, Quality and Energy

**CODENSA S.A. E.S.P.** through the development of its activities of electrical energy distribution and commercialization and related services, is committed to the management of health and the prevention of occupational risks oriented to the target of zero accidents, the effective processes development, the prevention of pollution, the continuous improvement of energy performance, and the compliance with regulatory, legal, and other applicable requirements in all its services, headquarters and with the organization members participation, to:

1. Satisfy the requirements of the services provided to our clients.
2. Encourage continuous collaboration with the organization stakeholders, for the development of business activities.
3. Promote and to maintain, on the company's personnel, the communication, culture and training in health care, safety, respect for the environment, rational resources use, energy efficiency and quality in the provision of our services.
4. Verify the principles of the policy and the process management periodically, in coherence with the objectives and guidelines of the Enel Group.
5. Ensure the information availability and necessary resources to achieve the objectives of the Integrated Management System.
6. Search for objectives to improve the provision of services permanently, employing new available technologies.
7. Identify, evaluate, control, reduce, eliminate and prevent risks, aspects and impacts, and optimize the energy use and consumption in our activities.
8. Support the development of environmental initiatives from the point of view of sustainable development, looking for the commitment to excellence in environmental management and in actions of mitigation and adaptation to climate change and biodiversity protection.
9. Preserve the health of our employees through promoting healthy lifestyles focused in food, physical activity and smoke free spaces.
10. Support the acquisition of products and services energetically efficient, and to develop projects for improving energy performance.
11. Promote between contractors and suppliers an adequate and effective quality, environment, health, job security and energy efficiency management.
12. Ensure continuous improvement of the management systems and their integration.

**CODENSA S.A. E.S.P.**, according to the code of ethics that guides the behavior towards the principles of social responsibility, considers the Integrated Management System fundamental for people participation of and for continuous improvement of business activities.
