

**SECURITIES ISSUER NEWS IN THE MEDIA  
CODENSA S.A. ESP  
AUGUST 17, 2021**

Regarding the news published on the website of Diario La República on August 12, 2021 under the title "Enel-Codensa wins award of large-scale solar project in eight companies", it is indicated that the information contained in the article is correct. As stated in the article, Codensa was awarded the contract for the supply and operation of 13 photovoltaic systems at the headquarters of eight Colombian companies, including Grupo Éxito, Postobón, Corona, Carvajal Empaques, Eternit and Central Cervecera de Colombia.

The project, which will be developed through the Enel X business unit, consists of the installation of approximately 82,700 solar panels with an installed capacity of 37.3 megawatts peak (MWp), energy capable of supplying the needs of more than 40,700 homes with an average consumption of 100 kWh/month.

*"The Energy Transition is of vital importance to ensure the sustainability of the environment. With the entry into operation of these photovoltaic systems, not only is it estimated to avoid the emission of 18,600 tons of CO2 per year, equivalent to the planting of more than 1,320,000 trees; it is also expected that organizations will reduce their energy consumption in the network by up to 20%, which translates into economic savings of approximately 15%. We are very proud to be part of this project for the supply of environmentally and socially responsible energy in the business sector, a milestone that positions us as one of the leaders in the energy generation market through this business model", said Lucio Rubio Díaz, CEO of Enel in Colombia.*

With an investment of close to €27 million (more than \$120.7 billion pesos) and an initial 12-year contract, the works to be delivered between 2021 and 2022 contribute to the achievement of the Paris Agreement and contribute to three Sustainable Development Goals of the United Nations 2030 Agenda: Affordable and Clean Energy (SDG 7), Sustainable Cities and Communities (SDG 11) and Climate Action (SDG 13). At the same time, they allow the Colombian electricity sector to continue advancing in two major goals it has set itself: to achieve a reduction of 11.2 million tons of CO2 by 2030 and to reach carbon neutrality by 2050.

It should be noted that the bidding process began in December 2019 and Enel-Codensa, through its Enel X business unit, was selected by presenting a competitive offer in terms of energy generation commitment, supported by its own design of photovoltaic systems, tariffs and energy savings, in addition to meeting the financial and technical requirements that had to be supported by previous experience in this type of projects.

In this regard, it is important to note that the Company has installed 16 photovoltaic systems and 5,892 solar panels in other companies in the country. With an installed power of 1.9 MWp between them, it is estimated an energy production of 2,295 MWh/year and the annual reduction of 872 tons of CO2, equivalent to the planting of more than 62,200 trees.

"From Enel's companies in Colombia, we will continue to be committed to providing innovative and cost-efficient solutions to promote the incorporation of non-conventional renewable energies in the country, leveraging the diversification of the energy matrix and making it more resilient, reliable, competitive and efficient", concluded Rubio Díaz.

## **Business vision**

### Corona

"For Corona it is a source of pride to be part of this pioneering initiative in Colombia that ratifies, as part of the celebration of Corona's 140th anniversary, our commitment to environmental sustainability through the use of cleaner energy and the achievement of efficiencies in our energy consumption," said Jaime Angel, president of Corona Industrial. "We are grateful for Cosenit's support and are confident that Enel's vast experience will be key to the success of this project and Colombia's energy transition."

### Postobón

"The use of energies such as photovoltaic is part of Postobón's commitment to address climate change. We are making a very important commitment to this type of energy supply, which, hand in hand with this project, will reach our operations in Malambo, Piedecuesta and Lux Bogotá, as well as Central Cervecera de Colombia, which are in addition to the supply we already had in Yumbo. In this way, we position ourselves as one of the largest industrial operations in the country with this type of energy and we are making progress towards our goal related to climate change: to reduce our greenhouse gas emissions by 30% by 2030", said Miguel Fernando Escobar P., president of Postobón.

### Carvajal Empaques

"Carvajal Empaques, aware of the social and environmental responsibility in the development of productive activities, recognizes the impact of climate change and its commitment to mitigate the effects of this, for this reason, participating as a strategic ally in the development of this large photovoltaic energy project, becomes relevant in the sustainability strategy defined by the company, which is aligned with one of the sustainability tactics called "Climate Change Management", which is aimed at reducing the carbon footprint that has been measured on the operation since 2018 and is in line with the challenges defined in the medium and long term by the company," said Ana Milena Muñoz Roldán, vice president of Sustainability and Circular Economy of the Carvajal Organization.

### Eternit

"We are very pleased with this initiative of the photovoltaic park at our Muña plant. This is part of our sustainability strategy initiative, in which we are committed to reducing our carbon footprint. This will help us to replace part of the electrical energy we consume at the plant and these initiatives help us to inherit a better country for future generations," said Miguel Rangel, director of the Andean Region of Eternit.
