

**ENEL COLOMBIA S.A. ESP
NOTICES PUBLISHED BY THE COMPANY
SEPTEMBER 07, 2022**

Enel Colombia informs that due to the impossibility of performing preventive maintenance at the El Guavio Hydroelectric Power Plant because of the blockades that persist in the municipality of Ubalá, as well as the mobility restrictions that prevented the passage of Enel Colombia's contractors on September 5, the Company was forced to declare unavailable generation units 1 and 5 of the plant as of today, September 7, 2022.

The generation units, which could not be inspected, contribute 500 megawatts (MW) of the asset's 1,260 MW of installed capacity.

Additionally, if the normal operation of the Guavio hydroelectric power plant is not guaranteed, on September 13 and 14, units 4 and 2, respectively, will be unavailable, which would leave out up to 500 MW of additional capacity, meaning that the hydroelectric power plant will only operate at 20% of its total capacity.
