Annual Historical Electricity Demand (TWh)

Annual Historical Generation (TWh)

Source: XM

- Energy demand growth reached 2.7% in 2010 compared to a 1.78% growth in 2009, improving its pace due to economic recovery and increasing demand from the industrial sector.
- Power generation grew by 1.6% in 2010 due to increasing demand and exports to Ecuador.
- The Mining and Energy Planning Unit (UPME) forecasts an increase in demand of 2.13% in 2011 reaching 57.344 GWh (base scenario).

Electricity Demand per capita vs. GDP per capita

Sources World Factbook – CIA. GDP per capita figures available as of 2009 and Electricity demand per capita as of 2007.

Electricity Demand (TWh)

(*) Estimated. Sources XM. UPME Last Forecast (July 2011) and Forecasts from the National Bureau of Statistics (DANE)

Capacity (GW)

Source XM. UPME Last Forecast (November 2010)

- Second largest generation company in Colombia in terms of installed capacity with 2,914 MW (20% of the country's system as of June 30, 2011).
- Second largest generation company in Colombia, measured by total electricity generation with 5,510 GWh produced as of June 30, 2011 (20% market share).
- 11,305 GWh produced in 2010, representing a 20% market share.

Financial Results and Margins

(Million USD)

- High component of sales under contracts, contributes to stabilize the margin without limiting trading opportunities in the spot market

- Stable operational revenue and improvement in EBITDA margin in 2010, in spite of lower generation, higher fuel costs, and lower spot prices during the 2nd half of 2010
- During the IH 2011, EBITDA increased due an improvement in operational results, as fuel costs were lower, given an increase in hydro generation and lower energy purchases in the spot market

Electricity Demand in Codensa's Area (GWh)

- Demand for the use of Codensa's network by other commercialization companies reached 2,118GWh (32% of total demand).
- As of June 30, 2011 90% of sales were supported by electricity purchased in contracts in previous years assuring price stability

TAM Losses Index

Source: Codensa

- Codensa has reinvented its losses control strategies by means of customers selection through macro measurement, intensive follow-up to stealing focal points, improvements in equipments and operation times and technology update processes to monitor clients in order to confront stealing modernization and the impossibility to apply sanctions
- The losses control plans have improved inspections effectiveness and achieved a trend change towards 7,98% levels as of June 2011

Evolution of Operational Revenues

(Million USD)

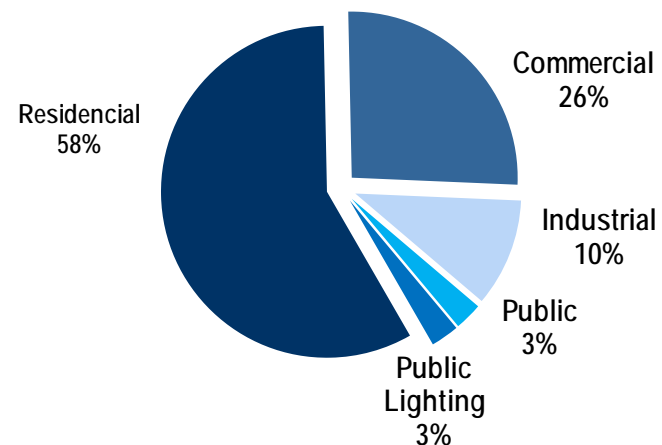

- During the IH 2011 operational revenues increased in line with the demand dynamic in Codensa's area
- During the same period, the EBITDA margin decreased due mayor compensations for service quality (variable costs) caused by the rainy season extended during the IH of 2011 and mayor restrictions (associated costs to energy purchases), included in the tariff

- Sales to residential and commercial clients represented more than 80% of operational revenues.

Stockholm Convention

- On June 2008, the Government assigned Emgesa the reliability charge associated to the construction of El Quimbo Hydroelectric Plant:
 - Single purpose reservoir, located on the Magdalena River, 12 km upstream from Betania.
 - Installed capacity: 400 MW (Francis, 2x200).
 - Expected average annual generation: 2,216 GWh (60% Load Factor).
 - Firm Energy Obligation:

	Dec. 2014- Nov.2015	Dec.2015- Nov. 2016	Dec. 2016- Nov. 2017	Dec. 2017- Nov. 2018	...	Dec. 2033- Nov. 2034
Firm Energy Obligation (GWh / year)	400,00	852,33	1.350,00	1.650,00	1.650,00	1.650,00
Price US\$ / MWh	13,998	13,998	13,998	13,998	13,998	13,998
Million USD	5.599	11.931	18.897	23.097	23.097	23.097

- Average Life: 50 years.
 - Total project area: 8.586 Ha. (6 municipalities).
 - Construction period: Oct.2010 – Dec.2014.
 - Estimated Investment: US\$ 837 million.
 - Environmental and Social compensation:
 - ✓ Restoration of 11.079 Ha in Dry Tropical Forest ecosystems, considered strategic within the national environmental policy for the restoration of flora and fauna.
 - ✓ Emgesa aims to have 100% of the relocated population with a quality of life equivalent or better than what they had prior to the relocation.
- Together with Betania, El Quimbo will supply nearly 8% of Colombia’s electricity demand.

The construction of El Quimbo is aligned with Emgesa’s central purpose and growth strategy:
“To provide the energy that promotes the development and the welfare of Colombia, our clients and the people we reach”

Objectives of the Financial Plan

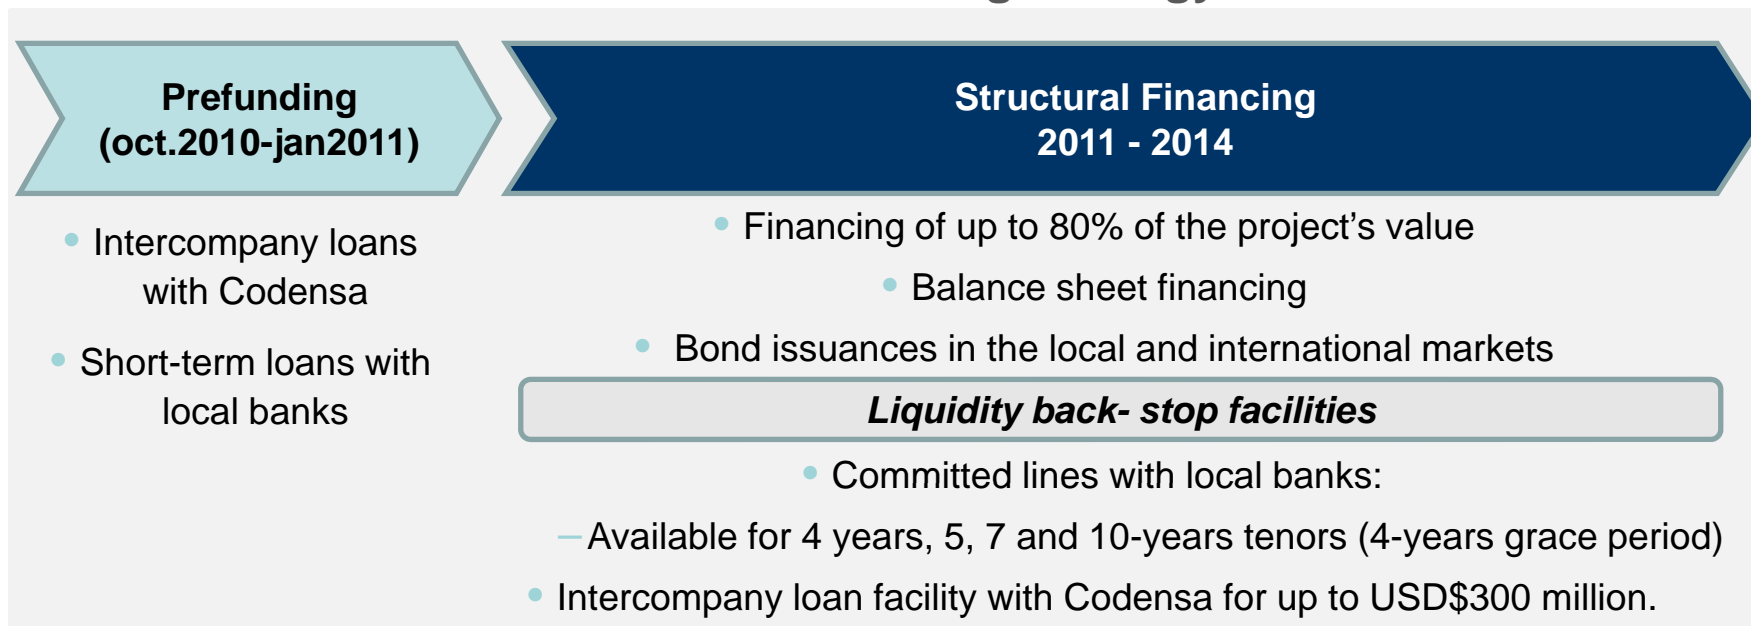

- **Certainty** in the availability of funds
- Minimize **FX exposure**
- Maintain **local AAA** and **international Investment Grade**
- Maintain **dividends distribution to shareholders**
- Minimize **financial costs**

Instruments Analyzed

- Export Credit Agencies (ECAs)
- Multilateral and Bilateral Agencies
- Loans with local and international banks
- Bonds in the local and international capital markets

El Quimbo Financing Strategy

- **1905 people** dedicated to the project as of June 30, 2011
- **USD\$17, 807 million*** invested regionally
- **120 families** from La Escalereta agreed to be reallocated
- **38 projects approved**, that represent **USD\$5,954 million***, included in municipal development plans were approved benefiting more than **80.000 people**
- **More than 5.000 requirements** have been attended since 2009 at the Gigante and Garzon offices
- **600 meetings** with communities and authorities since 2009

*FX: 1,780.16 as of June 30, 2011

Deviation Tunnel Entrance

Social Features

- Domingo Arias community from Paicol municipality, conformed by 9 families, was fully reallocated
- As of July, 2011 more than USD\$17,807 million have been invested in the region trough services and local acquisitions
- As of July, 2011 173 people are non qualified labor force (100% form the region), 836 are technically qualified labor force(90% from the region) and 896 are qualified labor force (42% from the region)
- Emgesa agreed to provide a “one time disbursement” of USD\$9,269 million for the execution of projects included in the development plans of municipalities

Environmental Features

- In June 2011 the Ministry of the Environment, Housing and Territorial Development and the CAM (Corporación Autónoma Regional del Alto Magdalena) adopted preventive measures to some activities of the project. Emgesa understood them as improvement opportunities with the aim to guarantee the execution of its commitments. Recently, most of the preventive measures were raised and the activities continue
- An investment of USD\$545 million is dedicated to perform a study about fish communities in Magdalena River and will facilitate an adequate the decision making process during the reservoir construction process

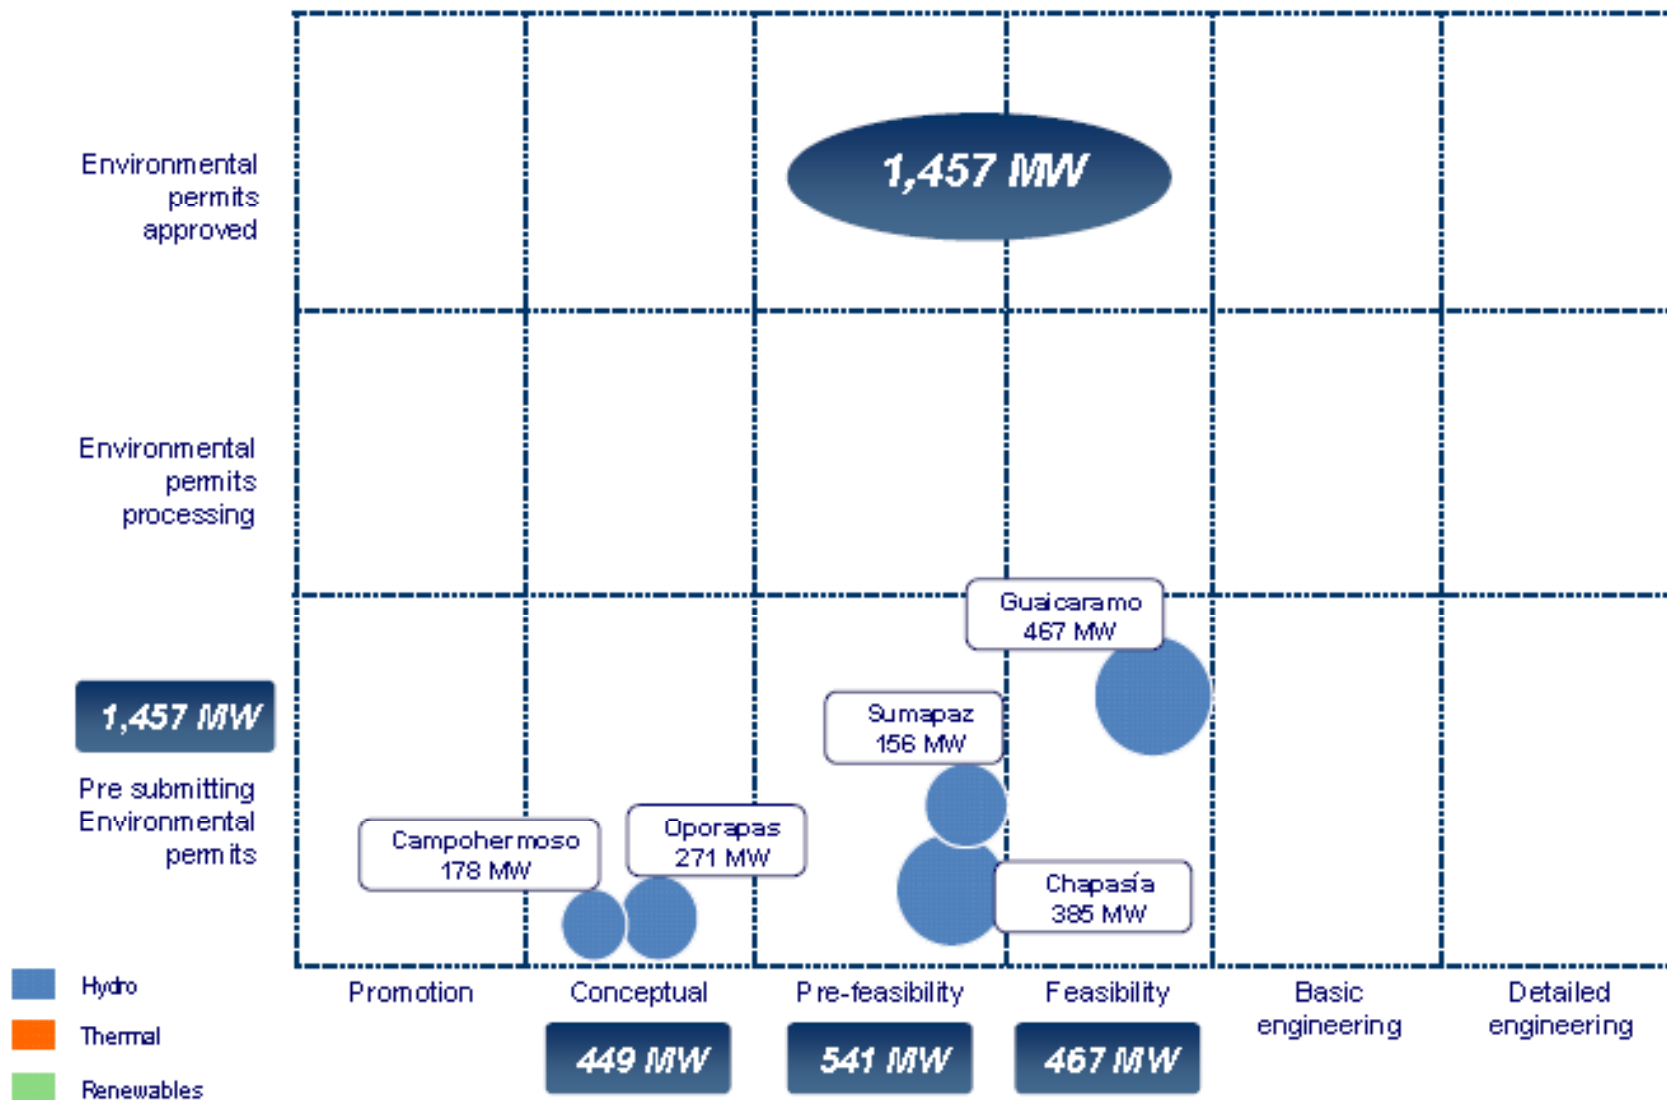

Construction Features – Deviation Tunnel

- During July, 2011 a project landmark was achieved when the two underground excavation fronts of the deviation tunnel were united. This important issue will contribute to the deviation of the Magdalena River in January, 2012
- In addition, important developments n the construction of roads, campsites and energy line have been achieved

*FX: 1,780.16 as of June 30, 2011

▪ Strong generation project pipeline under development (more than 12 GW)

Action Plan for 2011

Operational

- **G:** Maximize revenues from reliability charge
- **G:** Optimize availability of generation plants
- **D:** Improve quality of service in distribution (NIEPI and TIEPI)
- **D:** Improve losses control in Bogota and Cundinamarca
- **G:** Move forward with the construction of El Quimbo according to schedule

Financial

- **G + D:** Maintain the positive trend in the financial results
- **G:** Obtain financing for El Quimbo on a timely and optimal manner
- **G:** Refinance Emgesa's amortizations
- **G + D:** Distribute dividends from net income of the period October- December 2010
- **G + D:** Minimize financial expenses through active liability management
- **G + D:** Maintain AAA local rating for Emgesa and Codensa, and IG for Emgesa
- **G + D:** Internationalization of the Investor Relations Office

Transparent and pro-market regulatory framework

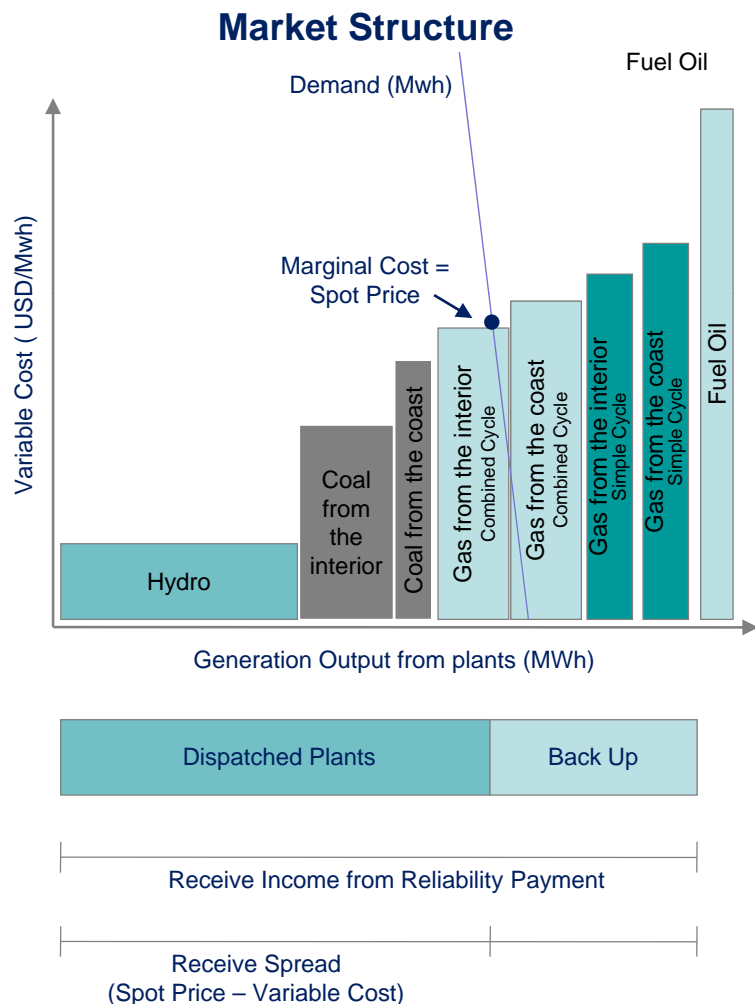

- Colombian power sector reform is regarded as a benchmark for other emerging markets willing to incorporate market-friendly reforms into their utilities regulation and attract private investment.
- Transparency, growth outlook, clear market signals, and the new “Reliability Payment” scheme position the Colombian energy sector as one of the most attractive amongst its Latin American peers.
- Along with Colombia’s stable macroeconomic policies and growth prospects, sector reform has translated into increased interest from world-class financial and strategic investors.

Market Structure

Colombian electric sector follows the basis of the U.K./Chilean model

Dispatch and Pricing Model

- Spot Market
 - One day in advance, generators offer to supply electricity at a certain tariff for each hourly block, and the pool is cleared at the lowest tariff that will match expected demand.
 - All generators that are dispatched at that hour receive the same highest tariff quoted by the least efficient generator dispatched.
- Freely Negotiated Contracts
 - Generators may freely enter into negotiated contracts with either unregulated customers or with distributors/trading companies.
 - As in the Spot Market, all generators that are dispatched at that hour receive the same highest tariff quoted by the least efficient generator dispatched.
- Reliability Payment
 - The method compensates each electricity generation plant for their firm commitment to supply electricity generation to the NIS during scarcity periods to avoid electricity shortages.
 - It encourages new investments in generation plants.

Colombian electricity distribution sector

Unit Cost

 Generation
  Transmission
  Distribution
  Commercialization
  Losses
  Restrictions

Charge per use

$C = \frac{\text{Cost per invoice}}{\text{Average invoiced consumption}}$

$\$/\text{Kwh} = \frac{\text{Investment} + \text{AOM (Admin. \& Maintenance)}}{\text{Demand}}$

Fixed Cost

$C_{uf\ m} = C_{f\ m}$

Generation: Cost of the energy purchases.

Transmission: Cost of the use of the interconnected system for electricity transmission .

Distribution: Cost of the use of the local distribution system and the regional transmissions system.

Losses: Recognized losses, including costs of the plans to manage losses.

Restrictions: Cost of restrictions and services associated to generation.

Unit Cost: Unitary cost, variable part

Fixed Cost: Fixed cost of commercialization.
